

The Eco-Friendly Anti-Scale System

No Salt . No Chemicals . No Maintenance . No Magnetism

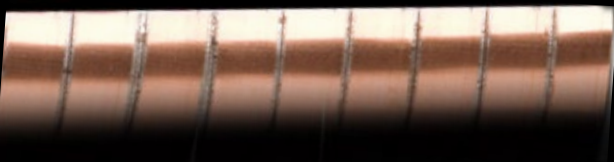

Vulcan Acrylic Cast

The Vulcan acrylic cast ensures that the circuit board is fully protected. All parts are covered in acrylic. This guarantees a high life expectancy.

Vulcan Impulse Bands

The customized Vulcan copper impulse bands are extremely thin and flexible with minimized isolation. This way, they achieve minimal spacing loss and maximize the direct-contact-ratio up to 97,5%. Their special copper material guarantees the best possible transfer output.

Independent of the velocity

Vulcan is not magnetic-based and operates 100% independent of the velocity (water flow rate) in the pipe and constantly provides reliable impulses.

10 Years International Warranty

Due to the special acrylic protection Vulcan has a life expectancy of over 30 years.

German 24 Volt Impulse-Technology

The water is treated with the German Vulcan 24 Volt Impulse-Technology that control scale in an eco-friendly way.

3-32 kHz Frequency Range

Vulcan works on a frequency range between 3-32 kHz with different frequency peaks. The secret to the right performance of physical water treatment lies in the composition of these impulses. CWT has developed and fine-tuned them for over 30 years.

Automatic Memory Function

The automatic memory program keeps Vulcan running correctly. In case of a power failure Vulcan automatically resets back to the last program once power is regained.

Low energy costs

Vulcan requires very little electrical power as it is very economical. The units operate with 2 to 3 Watt. The running costs are approx. ~3 - 6 EUR (USD 3 - 7) per year.

Vulcan is a German quality product that has been manufactured by the family-run Christiani Wassertechnik GmbH since 1989.
